

What is Kangen Water®?

Kangen Water® is delicious water created from Enagic's innovative water technology. Not only do these devices filter your tap water, but they also produce ionized alkaline and acidic waters through electrolysis. These waters can be used for various purposes, including drinking, cooking, beauty, and cleaning.

Problems With Commonly Used Waters

Tap water

Tap water is a healthier option than soft drinks. But according to the Environmental Working Group, there have been 315 pollutants found in America's tap water since 2004, and over half of these pollutants are completely unregulated and can legally exist in any amount.

At the current levels of contamination, the public is starting to question the quality of tap water and wonders if it is safe enough to drink. Based on these facts, it's no wonder that the demand for Kangen Water® is constantly increasing.

Bottled water

Bottled water is not necessarily healthier than tap water and yet it costs much more! Although associated with healthy water, bottled water is not guaranteed to be any healthier than tap water. Often the only difference is the added minerals which have no proven health benefits.

A four-year study by the Natural Resources Defense Council shows that 1/3 of the bottled water tested contains levels of contamination which exceed allowable limits. Bottled water can also be slightly acidic, which may affect your body's pH balance. Finally, the environmental impact caused by the production and disposal of plastic bottles is harmful to our ecosystem.

Reverse osmosis water

Reverse Osmosis is a filtering process which may be effective in areas that do not receive municipally treated water and is commonly used in bottled water

facilities. The problem with this process is that dangerous chemicals like pesticides, herbicides, and chlorine are molecularly smaller than water and can pass freely through the filter. Reverse osmosis removes healthy, naturally occurring water minerals. These minerals not only provide good taste, they also serve a vital function in the body's system. When stripped of these minerals, water can be unhealthy. Also, 2-3 gallons
